

# Gardening Like the Forest:

## Home-Scale Ecological Food Production

Healthy forests maintain, fertilize, and renew themselves, naturally. Would you like to have an abundant food-producing ecosystem growing in your back yard? You can! Edible forest gardens mimic the structure and function of natural forests while growing food, fuel, fiber, fodder, fertilizers, pharmaceuticals, and fun. We can meet our own needs and regenerate healthy ecosystems at the same time. See the vision of forest gardening with backed with scientific background, living examples, useful perennial edibles for your own garden, and deep implications for our sense of our connection to the earth.

**Friday, April 4th 2014**

**7:00 - 9:00 pm**

**Marbletown Community Center**

**3564 Main St. Stone Ridge, NY 12484**

**admission by donation**

Dave Jacke, author of the award winning two-volume book *Edible Forest Gardens*, has studied ecology and design since the 1970s, and runs —Dynamics Ecological Design—. As an engaging and passionate teacher of ecological design and permaculture, Dave has designed, built, and planted landscapes, homes, farms, and communities all over the world. He holds a B.A. in Environmental Studies from Simon's Rock College and a M.A. in Landscape Design from the Conway School of Landscape Design.
